

Cards Against Humanity Mobile Game - Sprint Log for March 25th

User Story	Sprint Task	Owner(s)	Initial Est. (Hours)	Complete
			56	Y/N
As a developer I want to enable my fellow developers to code the game logic				
	Make sure everyone understands the Network API in order to be able to move forward with the project.	All		
	Simplify, document, and sit down with others to explain what they need to touch in the system to achieve their tasks	Eric & Jim	10	
As a developer or user I would like an android activity of the game board with a simple background				
	Create graphic artwork for new game table from scratch, add to existing project, modify and commit once altered to fit correctly.	Kalena	5	
	Create graphic for front of cards and place on top of table graphic in project.	Kalena	2	
	Update Card logo graphic so it's not so pixelated	Kalena	1	
	Get different pictures to show up on different player icons	Christina	5	
	We need a Czar screen that lets a user pick the winning card of that round	Eric	10	
As a user I want each user to be able to have different character pictures for each user around the table.				
	Create or find pictures for each user. (Try simple animal shapes or silhouettes)	Kalena	4	
	Connect Images to players programmatically.	Kalena	6	
As a developer I want the application to handle action events: scroll over cards, select card; scroll through my cards easily so I can see what I have in my hand fast				
	Make card user interface interact with game logic	Eric	3	
	Make server remember what cards are in who's hand	Jim	5	
As a developer I want to use Gestalt's Principles and other human factors engineering techniques to layout/design the interface.				
	Add shading to table to add visual depth.	Kalena	1	
As a developer it might be an interesting test tool to be able to play with the computer				
	Make a player that will randomly select cards to play and cards to choose as the czar	Jim	6	
As a user I want a appealing GUI				
	Make splash screen a black and white theme, space out the input fields and make it pretty! http://androidniceties.tumblr.com/	Christina	8	
	Use gray scale for crown and game table	Christina	1 - 2	
As a user I would like to identify who is the current Zaar of the game (user currently asking the question) via name, image, or other entity				
	The Zaar crown needs to work programatically	Christina	?
